### **Objective**

To join a dynamic medical device organization committed to enhancing the care of patients by affording me the opportunity to educate and train physicians, nurses and other clinical professionals on best practices for use of the applicable product.

To obtain a position as a member of the clinical support team responsible for providing technical clinical expertise and support of the sales process to colleagues, current customers and/or potential customers.

To work collaboratively with clinical and sales teammates to identify and capitalize on sales opportunities by creating competency, comfort and expertise with all appropriate technologies among physician and support staff.

To perform work exercises independent judgment in planning, organizing, and performing work; to monitor performance and report status to manager.

### **Profile**

Self-motivated professional with a commitment to improving both experiences and outcomes for both sales professionals and physicians.

Innovative, analytic thinker who enjoys challenges and welcomes new tasks.

Reliable, quick learner with an energetic and positive attitude; organized and attentive to details.

Ability to manage multiple demanding and complex tasks, facilitate patient care and staff communication, as well as coordinate time and accomplish tasks efficiently.

Effective communicator, listener, and advocate.

### **Education**

Saint Louis University, St. Louis, MO  
Bachelor of Science in Nursing

August 2013

### **Recent Prior Work Experience**

Vanderbilt University Medical Center- Nashville, TN

CVICU RN

September 2017- Present

Responsible for providing medical care, both immediately post-operatively and while in the CVICU, to patients who have undergone different cardiovascular surgeries including but not limited to CABG, AAA repairs, valve replacements, heart and/or lung transplants.

Expert at airway management, pain management, drip titration, critical device and equipment management, maintaining hemodynamic stability, and heart rhythm interpretation and intervention.

Meet the communication and educational needs of patients and family members, while providing care that reflects initiative and responsibility consistent with professional expectations.

Responds quickly and accurately to changes in clinical condition with the appropriate response to treatment.

Naples Community Hospital-Baker Campus- Naples, FL

Cardiac Telemetry RN

August 2015- August 2017

Utilized the nursing process to develop a patient's plan of care; including assessment, intervention, re-assessment, long term planning, and patient teaching.

Planned and implemented nursing care needs both before and after cardiac intervention such as cardiac catheterization, cardioversion, and other procedures.

Responded quickly to emergencies on the floor requiring initiation of life-saving response.

Managed multiple medication drips simultaneously following proper protocol.

Collaborated with interdisciplinary team members to support quality patient outcomes.

Village Manor Park-Maplewood Campus - West Allis, WI

Ventilator RN

December 2014-August 2015

Conducted sound and ethical decision making as the only nurse on a 13 bed unit caring for both chronically ventilator dependent residents as well as those being weaned; along side one respiratory therapist and one patient tech.

Prioritize care of needs within a multi-resident assignment from acute assessment needing immediate intervention such as respiratory distress requiring deep suction, exchange of ineffective tracheostomies and PEG tubes, to assisting with activities of daily living such as resident hygiene.

Provided quality nursing care in accordance with resident policies and procedures.

Accurately documented all elements of nursing assessment, treatments, medications, and follow-up care.

Froedtert and the Medical Center of WI- St Joseph's Campus – West Bend, WI

Medical/Surgical RN

February 2014-Sept 2014

Scheduled, coordinated and delivered patient care for pediatric to geriatric patients within a 50 bed unit conducting general surgery, gynecological surgery, internal medicine, pediatrics, orthopedics, and behavioral health.

Promoted evidence-based care and safe, quality outcomes; including assessment of patients body and psyche, medication administration and discharge teaching.

Communicated with patient, hospital staff, and physicians to review nursing assessments and directives each shift to ensure patient well being and progression towards health.
