PRISCILLIA OBASI, MSN, FNP-C

OBJECTIVE To provide professional health care service within a progressive environment that provides opportunity for professional and personal growth while promoting healthier living among individuals in the community

CLINICAL EXPERIENCE

**THE MEDINA CLINIC: PRIMARY CARE OF ADULTS ACROSS THE
LIFESPAN**

144 HOURS

Under the supervision of my preceptor, mastered the art and science of clinical decision making among adult populations, focused on the diagnosis and management of primary healthcare needs and problems of the adults with common acute and chronic illnesses. Focused on physical and behavioral disease processes central to diagnosing illnesses as well as planning, implementing and evaluating therapeutic treatment programs for acute illnesses commonly encountered in primary healthcare setting.

**KANSAS CITY PEDIATRIC GROUP: PRIMARY CARE OF ADOLESCENT AND
CHILDREN**

144 HOURS

While focusing on the common health problems of children and adolescents, gained confidence in clinical experience in a primary healthcare setting that provided opportunities to assess, diagnose, plan, implement and evaluate therapeutic regimens of acute and chronic illnesses commonly found in patients 0 to 18 years. Performed health screening, immunizations, counselling and follow up where appropriate.

**ST JOSEPH MEDICAL CENTER: PRIMARY CARE WOMEN
HOURS**

144

Under the supervision of my preceptor gained the opportunity to teach and promote wellness in women through the process of screening for commonly seen gynecological disorders. Performed appropriate physical examination and assessment such as well women examination, breast examination, pap smear screening, pregnancy test. Learned to identified and reviewed significant risk factors, analyzed data to interpret results for the benefit of women seeking assistance with

planning healthy lifestyle behaviors.

THE MEDINA CLINIC: DIRECT CARE ROLES IN HEALTH PROMOTION AND DISEASE PREVENTION ACROSS THE LIFESPAN **144 HOURS**

As an advance practice nurse, taking a broader view of the comprehensive perspectives of health in a community is imperative. Focus in this clinical was on health-related behaviors that impact the health and wellness of individuals across the lifespan. Examination of nutrition, exercise, smoking and a sedentary lifestyle as it relates to common diseases like diabetes mellitus, hypertension, cardiovascular disease, kidney disease.
