Work Experience

Emergency Room RN

BSN at St. Anne Hospital - Burien, WA

August 2008 to Present

- Provided exceptional, consistent care to patients with a wide range of health complaints and life threatening conditions in a large, fast paced ER located in the culturally and socioeconomically diverse area of South Seattle.
- Led codes with ER Physicians by assisting the team and managing group dynamics during cardiac arrests, performing defibrillation following ACLS protocols while safely and timely administering various critical care vasopressors and antiarrhythmic medications such as epinephrine, amiodarone, adenosine, atropine, dopamine and norepinephrine.
- Responsible for appropriate and timely care of post arrest and critically ill intubated patients, employing therapeutic hypothermia, implementing proper sedation while monitoring and maintaining hemodynamic status and ensuring thorough documentation. Also performing various tasks such as OG tube and catheter placement and medication administration to prepare the patient for transfer to the ICU.
- Managed all levels of nursing care related to patients requiring conscious sedation who are undergoing emergency procedures such as cardioversion, fracture reduction and joint dislocations by proper monitoring of patients during each phase of the procedure from preparation to recovery and discharge or admission.
- Identified during triage or upon initial assessment of patients meeting CDC Sep-1 criteria and implementing nurse initiated treatment protocols in patients showing signs of sepsis or septic shock.
- Provided expert nursing care as a member of a certified primary stroke center by expertly performing NIH stroke scale assessments on FAST positive patients and when appropriate administering TPA bolus and infusion with expert and frequent monitoring of changes in neurological status through frequent documentation and assessments.
- Precepted new grads in the ER residency program and familiarize experienced newly hired RNs and with unit procedures and protocols.
- Served as back up change nurse during call outs, covering for training and staff meetings.

- EPIC trainer and superuser when implementing upgraded EMR software.

Per Diem Home Health Nurse

Envision Home Health and Hospice - Burien, WA
September 2015 to January 2017

- Provide initial patient assessment following hospital discharge to evaluate need for and appropriateness of nursing care within Medicare and Medicaid guidelines.
- Responsible for creating care plans and establishing frequency of home health nursing visits and assessing need for physical therapy services, ensuring properly detailed documentation in accordance with Medicare and Medicaid guidelines.
- Acted as company wound care specialist assigned to patients with chronic or difficult to manage wounds who were too frail, bedbound or unable to be referred for care at wound care centers.

Assessments

Nursing Skills: Clinical Judgment — Proficient

July 2020

Assessing a patient's condition and implementing the appropriate medical intervention.

Full results: [Proficient](#)

Indeed Assessments provides skills tests that are not indicative of a license or certification, or continued development in any professional field.

Additional Information

1. The antiphospholipid and antinuclear question required a little more thought for someone who hasn't used or heard that medical terminology in over 10 years of clinical practice as an ED nurse. It seemed like a strangely impertinent and time wasting question for such a short clinical assessment.
2. The sickle cell question. I've been an ED nurse for over 10 years treating in an area with a population prone to this condition. At the most I may have treated patients experiencing a truly debilitating sickle cell crisis 5 times or less. It's just not that common and is managed differently now.
3. The test advanced just prior to, and seemingly simultaneous to clicking advance not allowing me to answer questions I knew were correct.
4. Other than needing a fraction of a second more to answer and substituting a few more clinically relevant questions, I'm confident I would have scored as highly proficient or expert.
