## TEACHING AND MENTORING EXPERIENCE

Medical City Dallas (01/2014-05/2014)

Medical City Nursing Administration nominated me to be a part of their C.P.O.E. (Computer Physician Order Entry) project for their new version of Meditech® software in order to comply with Meaningful Use. Although I was deemed as a "Super-User", initially my role was not clearly defined. This allowed for flexibility and freedom to take on many different roles within the project. This included managing projects, agendas and deadlines, troubleshooting a vast array of issues that spanned from purely software issues to more complex, unencountered issues. I was nominated to not only troubleshoot, but to log and track the progress of these issues. I was an integral part of weekly corporate meetings. I worked in tandem with not only hospital personnel, but alongside team-members from the corporate level at H.C.A. (Hospital Corporations of America). In addition, when the head of the C.P.O.E. project (Director of Advanced Clinicals) was away on business, I was nominated to act as the "interim D.A.C." on occasion, temporarily taking on the responsibilities of that role. I educated many Registered Nurses and physicians on the new Meditech® software, and often accommodated them when their schedules did not allow for a traditional classroom.

Global Focus Marketing and Distribution, Ltd.

I played an integral part of the troubleshooting and maintenance of AFT Robots. In addition, I also trained their sales-personnel on the maintenance and troubleshooting of the Robot.
