WEEKENDERS- Please make sure the scale is used properly, there is a notch in the scale that the arrow needs to be placed on. Also there is lbs and kg weight on the scale in crestwood, the bottom numbers are kilograms and the one on top are in lbs, the arrow must be placed in the correct spot. Please if you don't know how to use it, ask someone who can show you the difference on the two different ways to get weights on pts. Now this patient who I legally blind and depends on rides from his family may need to come back in for the vial he missed. Also please when someone has an extra vial it must be placed back in the bag the meds came in for return purposes a sticky note is not reliable and can easily come off the med box.

**Subject:** RE: James Gawel

The scale is correct. It requires that the person using the scale place the weight in the proper notch to obtain the correct weight. We had two nurses check the scale using themselves and the scale is ok, if placed in the correct place.

I called Dr. Rubins RN she is going to talk w/ Dr. Rubin and get back to me.

Do we have any issues w/ our scale being off?

I would assume ours is correct?

Hello all Mr. Gawel was here this w/e for his Remicade. His weight here is 190 lbs but his weight at home was 215 lbs. He does not feel that the weight given is correct. He is concerned that the weight difference means that he did not receive the correct amount of Remicade and he already has symptoms when he is closer to his infusion. He is a pt of Dr. Rubin ☺. If we have him come in for the 100mg he is missing what is the size saline bag to put med in?
