Objective

To provide guidance to larger groups of patients with chronic diseases, in particular my interest is Diabetes.

I would like to get involved with the larger population of patients by doing outreach and providing care to improve their health and be a resource for patients who cannot get in to the clinic often enough to get care. I believe it is extremely important that our population of patients get care through outreach contact, home visits, phone contact, e mail, and other electronic media. It is a new an exciting time to provide health care and I strive to look for new and innovative ways to reach our patients and provide superior and most complete care to manage long term disease states.

Experience

Associated Physicians

July 2018- present
CDE

- Educate members with diabetes in self management of their disease
- Work as a team Member on the Diabetes registry and outreach patients via the diabetes work bench
- Anticipate, plan and manage patient transitions from the Hospital into their Home or community agency in group home.
