Work Experience

Endoscopy Technician

Wheaton Franciscan Healthcare - Racine, WI

September 2015 to July 2018

Working with a team of nurses and doctors to help assist in procedures such as esophagogastroduodenoscopies (EGD) and colonoscopies. We would have cases throughout the day where I would get the scopes and rooms ready to go. This involved cleaning the scopes and running them through machines to make sure they are thoroughly clean and sanitized. Also while in the procedure I would use multiple tools to take biopsies from the GI tract. After labeling the specimens I would send them to the lab to get ruled out for certain diseases and cancers.
