PROFESSIONAL EXPERIENCE

ABDOMINAL TRANSPLANT TELEMETRY RN

Keck Hospital of USC
Los Angeles, CA
September 2021 – Present

- Provide quality nursing care for the adult population undergoing liver or kidney transplants.
- Complete thorough head-to-toe assessments, administer IV and oral medications according to physician's orders and facility's protocols, and chart efficiently in Cerner electronic medical record system.
- Evaluate patient's responses to care plan, and collaborate with interdisciplinary team to adjust care plan accordingly.
- Assess for post-operative complications, notify physicians about changes in conditions, and collaborate with interdisciplinary team to enhance quality of care.
- Conduct telemetry monitoring with 6-lead EKG interpretation, identify irregular rhythms, and provide corrective action as necessary.
- Educate patients and family members regarding medications, lifestyle changes, and any relevant post-discharge information.

TELEMETRY/STROKE RN

St. Francis Medical Center
Lynwood, CA
January 2021 – July 2021

- Provided quality nursing care for the adult population with variety of respiratory (COPD, pleural effusion), cardiovascular (MI, CHF), neurological (CVA), and/or renal (ESRD) conditions.
- Conducted telemetry monitoring with 6-lead EKG interpretation, identify irregular rhythms, and work in partnership with other members of the healthcare team to initiate corrective action when client shows signs of adverse symptomatology.
- Prepared clients for tests and surgeries accordingly. Monitored patients' post-cardiac procedures and assess for complications.
- Scored stroke patients according to the NIH stroke scale and collaborate with other healthcare providers to deliver evidence-based treatments that will improve patient outcomes.
- Cared for ventilator-dependent patients, perform tracheostomy care, and collaborate with respiratory therapists to meet each patient's needs.
- Thoroughly educated patients regarding medical conditions, medications, and any additional relevant post-discharge information.
- Administered oral and IV medications according to physician orders and facility's protocols. Evaluated and analyzed client's responses to treatments, then adjusted as necessary.
- Conducted thorough head-to-toe assessments, notify healthcare providers about changes in condition, and complete documentation in a timely manner in the EPIC electronic medical record system.
