Registered Nurse License

February 2019 to December 2021

Additional Information

I am a highly motivated and dedicated Registered Nurse in Nigeria, open to learning and very keen on career advancement. I am particularly impressed by and attracted to your hospital's commitment to employees' career advancement and research, as I am interested in pursuing a career in Midwifery Nursing in the near future. I would like to bring in my experience working with various kinds of patients and clients (adults, children and the aged), having had experiences in both hospital, company and private care settings in my home country Nigeria. Making use with very little resources to provide exceptional care to patients of all ages, race and ethnicity has given me so much confidence to do same wherever I find myself. Furthermore, working in a large organization under great pressure and intense stress daily, for over a year now, has helped me to devise mechanisms in working under such stressful conditions without putting my patients or colleagues in danger.

Prioritizations of duties and time management have helped me immensely, alongside music therapy during my breaks and off days. The healthcare system cannot survive without collaboration. Team work is of great concern to me and I have subjected myself to it over the years, ensuring that the patient at the centre of the team gets the possible care through the contribution of all. I'll make sure to replicate this if employed. I am very thorough with tasks, and overtime have discovered how my perfectionist personality has become a major strength in my clinical skills, ensuring that my delivery of care is done meticulously and with accuracy. I believe that I can reproduce same in your prestigious NHS Trust. In conclusion, having gone through the rigorous process for NMC registration, including CBT, I strongly believe that I'm fit to practice in line with NMC code as a Nurse in the UK, after my OSCE.
